

STORAGE AND SEGREGATION RULES

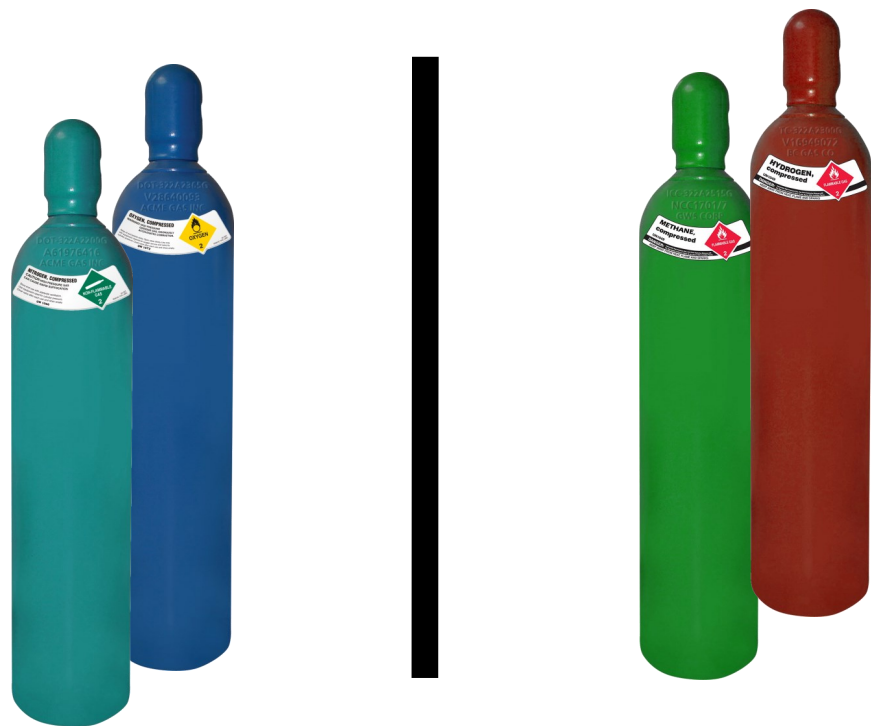

- ✓ Toxic gases always go in a vented enclosure such as a gas cabinet or fume hood.
- ✓ Inert and other non-reactive gases can go anywhere.
- ✓ Oxidizing and flammable gases don't have to be in a vented enclosure, but need to be **separated by 20 feet** or by a **non-combustible physical barrier**.

Oxidizing gases

Flammable gases

Or separate by a non-combustible physical barrier (distance rule does not apply)
